

Syngrafii Delivers You More Revenue with Increased Customer Growth

We enable 2 or more parties to complete transactions from anywhere worldwide, removing the delays & barriers associated with in-person paper based transactions.

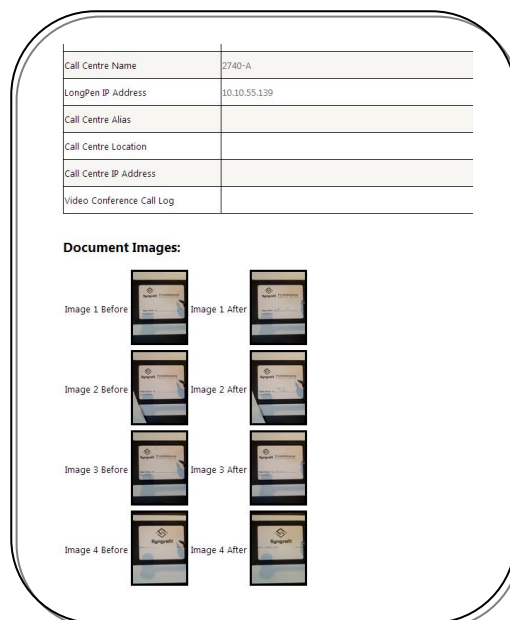

Market Differentiator: We are the only eSignature solution worldwide that enables users to execute an original one-time use signature onto paper, a digital document or a hybrid process while supporting an organization's security, compliance and workflow requirements.

MasterFile™ – Securing Your Transaction with Business Intelligence

MasterFile™ is a Syngrafii software product that provides organizations non-repudiation evidence of a transaction while delivering critical data for business optimization. During a Syngrafii signing session, MasterFile™ will capture a before and after image of the document(s) a user is signing – store the file on a local or cloud server – provide authorized user access to stored transaction records in a secure web portal. Adopting Syngrafii into a Live Contact Center Solution, MasterFile™ can be integrated with video and/or audio recording solutions allowing organizations to keep a record of the discussion & transaction execution in one file.

As MasterFile™ is a part of the transaction process, organizations can leverage our ability to capture GPS coordinates of a signing user, details of the party they are interacting with in live signing sessions, and date/start/end time of a transaction. Also captured is a record if the interaction has ended with a transaction and other customizable data that organizations and users may require.

With Syngrafii's MasterFile™, Signature Capture Software and LongPen Printer™, we provide signature execution onto hard copy documents and/or digital documents anytime, from anywhere.
